Availability of data and materials

All three datasets are publicly available from their original providers: CIC-IDS-2017 from the Canadian Institute for Cybersecurity, University of New Brunswick; CESNET-TLS-Year22 from Zenodo (DOI: 10.5281/zenodo.10608607); and UNSW-NB15 from the University of New South Wales, Canberra. The corrected CICIDS-2017 labels used in the real-noise experiment are derived by applying the publicly released labelling rules of Liu et al. (CNS 2022, https://github.com/GintsEngelen/CNS2022_Code) to the original release. The derived artifacts required to reproduce our results—code, configuration files, frozen data-split manifests with content hashes, the frozen noise-mapping matrix, result tables, guard/regression tests, and table-

and figure-generation scripts—are released in a public repository, https://github.com/One-bit-007/graph-cold, and archived on Zenodo, https://doi.org/10.5281/zenodo.21873516.

Competing interests

The authors declare that they have no competing interests.

Funding

No specific funding was received for this work.

Authors' contributions

Tianqi Guo: Conceptualization, Methodology, Software, Validation, Formal analysis, Investigation, Data curation, Writing — original draft, Writing — review & editing, Visualization. **Weiguo Wang**: Resources, Writing — review & editing. **Jian Wang**: Resources, Writing — review & editing. **Shiyin Zhu**: Resources, Writing — review & editing, Project administration.

Acknowledgements

Declaration of generative AI and AI-assisted technologies in the writing process

During the preparation of this work the authors used generative AI assistants (Kimi, Moonshot AI; GPT-based coding assistants) in order to assist with code development and debugging of the experimental pipeline, and to assist with language editing and drafting of the manuscript and submission documents. After using these tools, the authors reviewed and edited the content as needed and take full responsibility for the content of the publication. The tools were not used to generate, alter, or analyze research data, and all experimental results and statistical claims were verified by the authors against the frozen experimental artifacts.
